

Powerful. Simple. Affordable.

Association Case Study 1

CLIENT: A regional association with three separate business units and six locations spread throughout Virginia and Maryland that was spending \$30,000 a month on their fixed and mobile communications services.

CHALLENGE: The association wasn't clear about what telecom services were being billed to each location nor did they have visibility into their total monthly spend for both fixed and mobile services. They wanted to centralize their billing and gain control over their entire organization from headquarters. They didn't have a clean and efficient process to achieve that. Accounting integration was also a key requirement but each business unit used a separate accounting package.

RESOLUTION: In phase one of the set-up process, iTEMize created a comprehensive current inventory for all locations. Once all information was loaded into iTEMize, the client had full visibility across the total services at all their locations, and was able to manage all costs for the entire association. The client was also able to retain all of their disparate legacy accounting systems because iTEMize also gave the client the ability to export all cost allocations and other reports directly to Excel files.

Your Trusted **TEM**-mate

Inventory Management

iTEMize lets you track all your telecom services and equipment—both fixed and mobile—by user, location, or department.

Financial Management

iTEMize flags billing variances to validate your invoices. It also saves more money and time by allowing easy access to important financial details, trends, and reports. You control who can pay bills and where costs are allocated. You can even create output for your general ledger and accounts payable systems.

Contract & Dispute Management

iTEMize provides a central repository for important contract information that can even notify you via email about contract renewals. You can create disputes, email them to suppliers, and set reminders and actions. You'll never lose control again!

"12 percent to 20 percent of telecom charges are in error, and 85 percent of the errors are in the carrier's favor."
